

SUSTAINABILITY CONFIRMATION

In **2025**
Midland AB
in **Tollered**

returned

209 IBCs

via the SCHÜTZ TICKET SERVICE

for environmentally sound recycling and reconditioning.

This represents a saving of

8 t steel
3 t plastic

compared with the production of new SCHÜTZ IBCs.

According to data from the German Federal Environment Agency and the environmental institute www.probas.umweltbundesamt.de this corresponds to an equivalent of

22 t carbon emissions.

TOGETHER WE MAKE AN ACTIVE CONTRIBUTION TO PROTECTING THE ENVIRONMENT

The returned IBCs are taken to our recycling units, which hold ISO 14001 and/or ISO 9001 certification, where they are prepared for their next use. The steel grids and pallets are cleaned and reconditioned. All IBC components that come into contact with the filling goods (such as inner bottle, valve fittings, screw caps) are replaced with original SCHÜTZ components. All recycled material (100%) produced in the reconditioning process is reused in the production of pallets, corner protectors and other product components. By letting us collect and recycle our IBCs, you join with us in helping to conserve precious resources.
